```java
import java.util.*;

public class HelloWorld {

    public static void main(String []args){

        Scanner sc = new Sacanner(System.in);

        int n = sc.nextLine();

        int s1 = 0;

        int s2 = 0;

        char[] num = n.toCharArray();

        for(int i = 0; i < num.length; i++) {

            if((num[i] % 2) == 0) {

                s1+= num[i];

                System.out.println(num[i]);

                System.out.println("S pare: " + s1);

            }else {

                s2+= num[i];

                System.out.println(num[i]);

                System.out.println("S impare: " + s2);

            }

        }

        System.out.println("===================================================");

        System.out.println("S pare: " + s1);
```

```java
        System.out.println("S impare: " + s2);

        System.out.println("Mie numi da si nu inteleg de ce, am pus in for sa vad cum se schiba suma si ce
elemnt se afla pe poztia i, elemntul e corect insa suma nu,posibil ca el la suma imi aduna numarul de
ordine al caracterului in ascii");

        sc.close();
    }
}
```
